ANALYST CONCLUSION — CryptoDatEx BTC Intelligence

2026-05-31 07:33 UTC | Data: 2026-05-31 11:33:33 UTC | Language: EN

1. ON-CHAIN HEALTH SCORE

[N/A] — Glassnode/CryptoQuant/LookIntoBitcoin not connected.
Phase 2 needed: SOPR, NUPL, MVRV, Exchange Reserves, LTH, Whales, ETF.

2. KEY SIGNAL (from available data)

BALANCED 1%-zone imbalance: 0.84x MORE volume BELOW than above.

Zone 1: \$74,350-\$75,652 Volume: \$46.8B Distance: +1.46%

Funding Rate: +0.73330% (8h) Z-score: +1.47 -> overheated_long

Longs paying ~2.200% per day in funding — unsustainable positioning.

If price moves to \$75,404, \$46.8B in long liquidations cascade n/a.

3. FORECAST (7-14 days horizon)

Dominant mechanical force: NEUTRAL SQUEEZE risk (heatmap + funding)

- Zone 1 at \$75,404 is Liquidity Magnet — market has gravitational pull

- Vacuum gap \$72,788-\$75,001 (2.99%) enables fast price movement if triggered

COUNTERWEIGHT: Coinbase Premium = \$-109.34 (negative) -> no spot institutional flow

OI declining (-2.97% 24h, -9.01% 7d) -> market de-leveraging

CONCLUSION: Liquidation cascade mechanics neutral — lacks spot demand confirmation.

Key level: \$75,404 (trigger). Sustained rally needs CB Premium > 0.

4. OPERATIONAL LEVELS

Vacuum (fast pass): \$72,788-\$75,001 (2.99%)

Support (key): \$72,111-\$73,465 (\$45.5B) (floor)

5. MARKET TYPE
