2. KEY SIGNAL (from available data)

BALANCED 1%-zone imbalance: 1.12x MORE volume ABOVE than below.
Zone 1: \$64,971-\$74,280 Volume: \$254.6B Distance: +4.30%
Funding Rate: +0.54337% (8h) Z-score: +0.99 -> overheated_long
Longs paying ~1.630% per day in funding — unsustainable positioning.
If price moves to \$68,092, \$254.6B in long liquidations cascade n/a.

3. FORECAST (7-14 days horizon)

Dominant mechanical force: NEUTRAL SQUEEZE risk (heatmap + funding)
- Zone 1 at \$68,092 is Liquidity Magnet — market has gravitational pull
- Vacuum gap \$64,503-\$69,626 (7.67%) enables fast price movement if triggered
COUNTERWEIGHT: Coinbase Premium = \$-98.11 (negative) -> no spot institutional flow
OI declining (-3.03% 24h, -12.62% 7d) -> market de-leveraging
CONCLUSION: Liquidation cascade mechanics neutral — lacks spot demand confirmation.
Key level: \$68,092 (trigger). Sustained rally needs CB Premium > 0.

4. OPERATIONAL LEVELS

Long entry zone: \$65,421 (nearest long-liq cluster, -3.38%)
Crowd stops (longs): \$64,503-\$64,503 (\$0.3B)
Deep stop: \$63,934 -> \$63,766
Liquidity Magnet: \$68,092 (+4.30%) — Zone 1, \$254.6B
Extended target: N/A
Vacuum (fast pass): \$64,503-\$69,626 (7.67%)
Support (key): \$64,503-\$64,503 (\$0.3B) (floor)

EDITORIAL REVIEW

Generated: 2026-06-02 20:43 UTC | CryptoDatEx | Sources: CoinGlass + mempool.space + farside.co.uk + alternative.me

Data confidence: MEDIUM (derivatives only; no on-chain confirmation)
Internal conflict: Funding(+) signals squeeze DOWN; CB Premium(-) signals NO demand
Blind spots: CVD, L/S Ratio, Orderbook, VWAP, all on-chain metrics.
Recommendation: Connect Phase 2 sources to complete the 9-layer module.
