Stablecoin Supply: \$263.22B total (USDT \$187.17B + USDC \$76.05B)

SOPR/NUPL/MVRV/Exchange Reserves/LTH/Whales/Miners: [N/A] — Glassnode required

2. KEY SIGNAL (from available data)

EXTREME 1%-zone imbalance: 2.06x MORE volume ABOVE than below.

Zone 1: \$59,718-\$68,460 Volume: \$151.0B Distance: +2.31%

Funding Rate: +0.12584% (8h) Z-score: +0.03 -> overheated_long

Longs paying ~0.378% per day in funding — moderate positioning.

If price moves to \$63,893, \$151.0B in short liquidations cascade upward.

3. FORECAST (7-14 days horizon)

Dominant mechanical force: SHORT SQUEEZE risk (heatmap + funding)

- Zone 1 at \$63,893 is Liquidity Magnet — market has gravitational pull

- Vacuum gap \$64,089-\$69,536 (8.70%) enables fast price movement if triggered

COUNTERWEIGHT: Coinbase Premium = \$-78.82 (negative) -> no spot institutional flow

OI declining (-11.19% 24h, -21.56% 7d) -> market de-leveraging

CONCLUSION: Short squeeze mechanics neutral — lacks spot demand confirmation.

Key level: \$63,893 (trigger). Sustained rally needs CB Premium > 0.

4. OPERATIONAL LEVELS

Long entry zone: \$61,387 (nearest long-liq cluster, -2.00%)

Crowd stops (longs): N/A

Deep stop: N/A

Liquidity Magnet: \$63,893 (+2.31%) — Zone 1, \$151.0B

Extended target: \$69,536 (Zone, +0.00%)

Vacuum (fast pass): \$64,089-\$69,536 (8.70%)

Support (key): N/A (floor)

5. MARKET TYPE

liquidation_state: NEUTRAL

Type: NEUTRAL/RANGE — await catalyst

EDITORIAL REVIEW

Data confidence: MEDIUM (derivatives only; no on-chain confirmation)

Internal conflict: Funding(+) signals squeeze DOWN; CB Premium(-) signals NO demand

Blind spots: CVD, L/S Ratio, Orderbook, VWAP, all on-chain metrics.

Recommendation: Connect Phase 2 sources to complete the 9-layer module.
