2. KEY SIGNAL (from available data)

ELEVATED 1%-zone imbalance: 0.43x MORE volume BELOW than above.

Zone 1: \$60,947-\$65,775 Volume: \$149.8B Distance: +1.76%

Funding Rate: +0.01112% (8h) Z-score: -0.23 -> mildly_bullish

Longs paying ~0.033% per day in funding — moderate positioning.

If price moves to \$63,509, \$149.8B in long liquidations cascade downward.

3. FORECAST (7-14 days horizon)

Dominant mechanical force: LONG SQUEEZE risk (heatmap + funding)

- Zone 1 at \$63,509 is Liquidity Magnet — market has gravitational pull

- Vacuum gap \$60,253-\$63,361 (4.99%) enables fast price movement if triggered

COUNTERWEIGHT: Coinbase Premium = \$-60.54 (negative) -> no spot institutional flow

OI declining (-11.56% 24h, -20.99% 7d) -> market de-leveraging

CONCLUSION: Long squeeze mechanics neutral — lacks spot demand confirmation.

Key level: \$63,509 (trigger). Sustained rally needs CB Premium > 0.

4. OPERATIONAL LEVELS

Long entry zone: \$61,019 (nearest long-liq cluster, -3.23%)

Crowd stops (longs): \$59,782-\$60,725 (\$13.4B)

Deep stop: \$59,116 -> \$59,116

Liquidity Magnet: \$63,509 (+1.76%) — Zone 1, \$149.8B

Extended target: \$66,330 (Zone, +0.00%)

Vacuum (fast pass): \$60,253-\$63,361 (4.99%)

Support (key): \$59,782-\$60,725 (\$13.4B) (floor)

5. MARKET TYPE

liquidation_state: NEUTRAL

Type: NEUTRAL/RANGE — await catalyst

EDITORIAL REVIEW

Data confidence: MEDIUM (derivatives only; no on-chain confirmation)

Internal conflict: Funding(+) signals squeeze DOWN; CB Premium(-) signals NO demand

Blind spots: CVD, L/S Ratio, Orderbook, VWAP, all on-chain metrics.

Recommendation: Connect Phase 2 sources to complete the 9-layer module.
